

*How to.....*

## ***Building a Fire Pit using Fire Pit Blocks***

Fire pits for campsites and backyards are easily constructed using **KING Fire Pit Blocks**. Build a low cost, durable concrete fire pit that fits together in 10 minutes. Maintenance free interlocking blocks that slide together effortlessly will last through many enjoyable years of outdoor fires.

### ***STEP 1: Prepare the base:***

Select a location and prepare a flat, level solid base about 36" x 36".

### ***STEP 2: Laying the blocks:***

Select 7 blocks and form them into a ring so the tongue of one block interlocks with the groove of another block. Install the fire screen.

### ***Other uses:***

Also use for tree rings, curbing, borders etc. For additional height lay additional rows overlapping joints for stability. For fire pits with multiple rows, it's recommended to leave an opening of one block in the base row to provide easy access to shovel out ashes and create a draft.

### ***Tips for working with KING Fire Pit Blocks:***

- 1) Base should be solid, level and flat.
- 2) Use a fire screen.
- 3) Never leave fires unattended.
- 4) Clean out ashes.
- 5) Check local municipal regulations.
- 6) Use proper safety equipment i.e. safety glasses, gloves, etc.
